

Design Spec: Onboarding Permission Flow

Page 1 - Background

Funnel analysis showed 61% of new users dropped off on the combined permissions screen, which requested location, notifications, and contacts access simultaneously with no context.

Proposed Flow

Page 2 - Proposed Flow

Screen 1: Location, with a one-line reason shown before the OS prompt.

Screen 2: Notifications, with a one-line reason shown before the OS prompt.

Screen 3: Contacts access is deferred entirely; only requested later when the user taps 'Invite a friend'.

Success Metrics

Page 3 - Success Metrics

Target: raise permission-screen completion rate from 39% to 65%+,
and reduce unnecessary contacts-permission prompts by at least 80%.

Result

Page 4 - Result

A/B test after shipping the split flow: completion rate rose to 74%,
and contacts permission requests dropped 90% versus the old flow.
